Enabling TestNets in Anchor

Guide for Anchor on iOS

Version: 1.2.3

Step 1 - System Settings

To enable TestNets within Anchor, you will need to access your iOS device's system settings.

Once within Settings, you will need to scroll down to the bottom where you'll see configurations for individual apps, which is where you should see Anchor in the list.
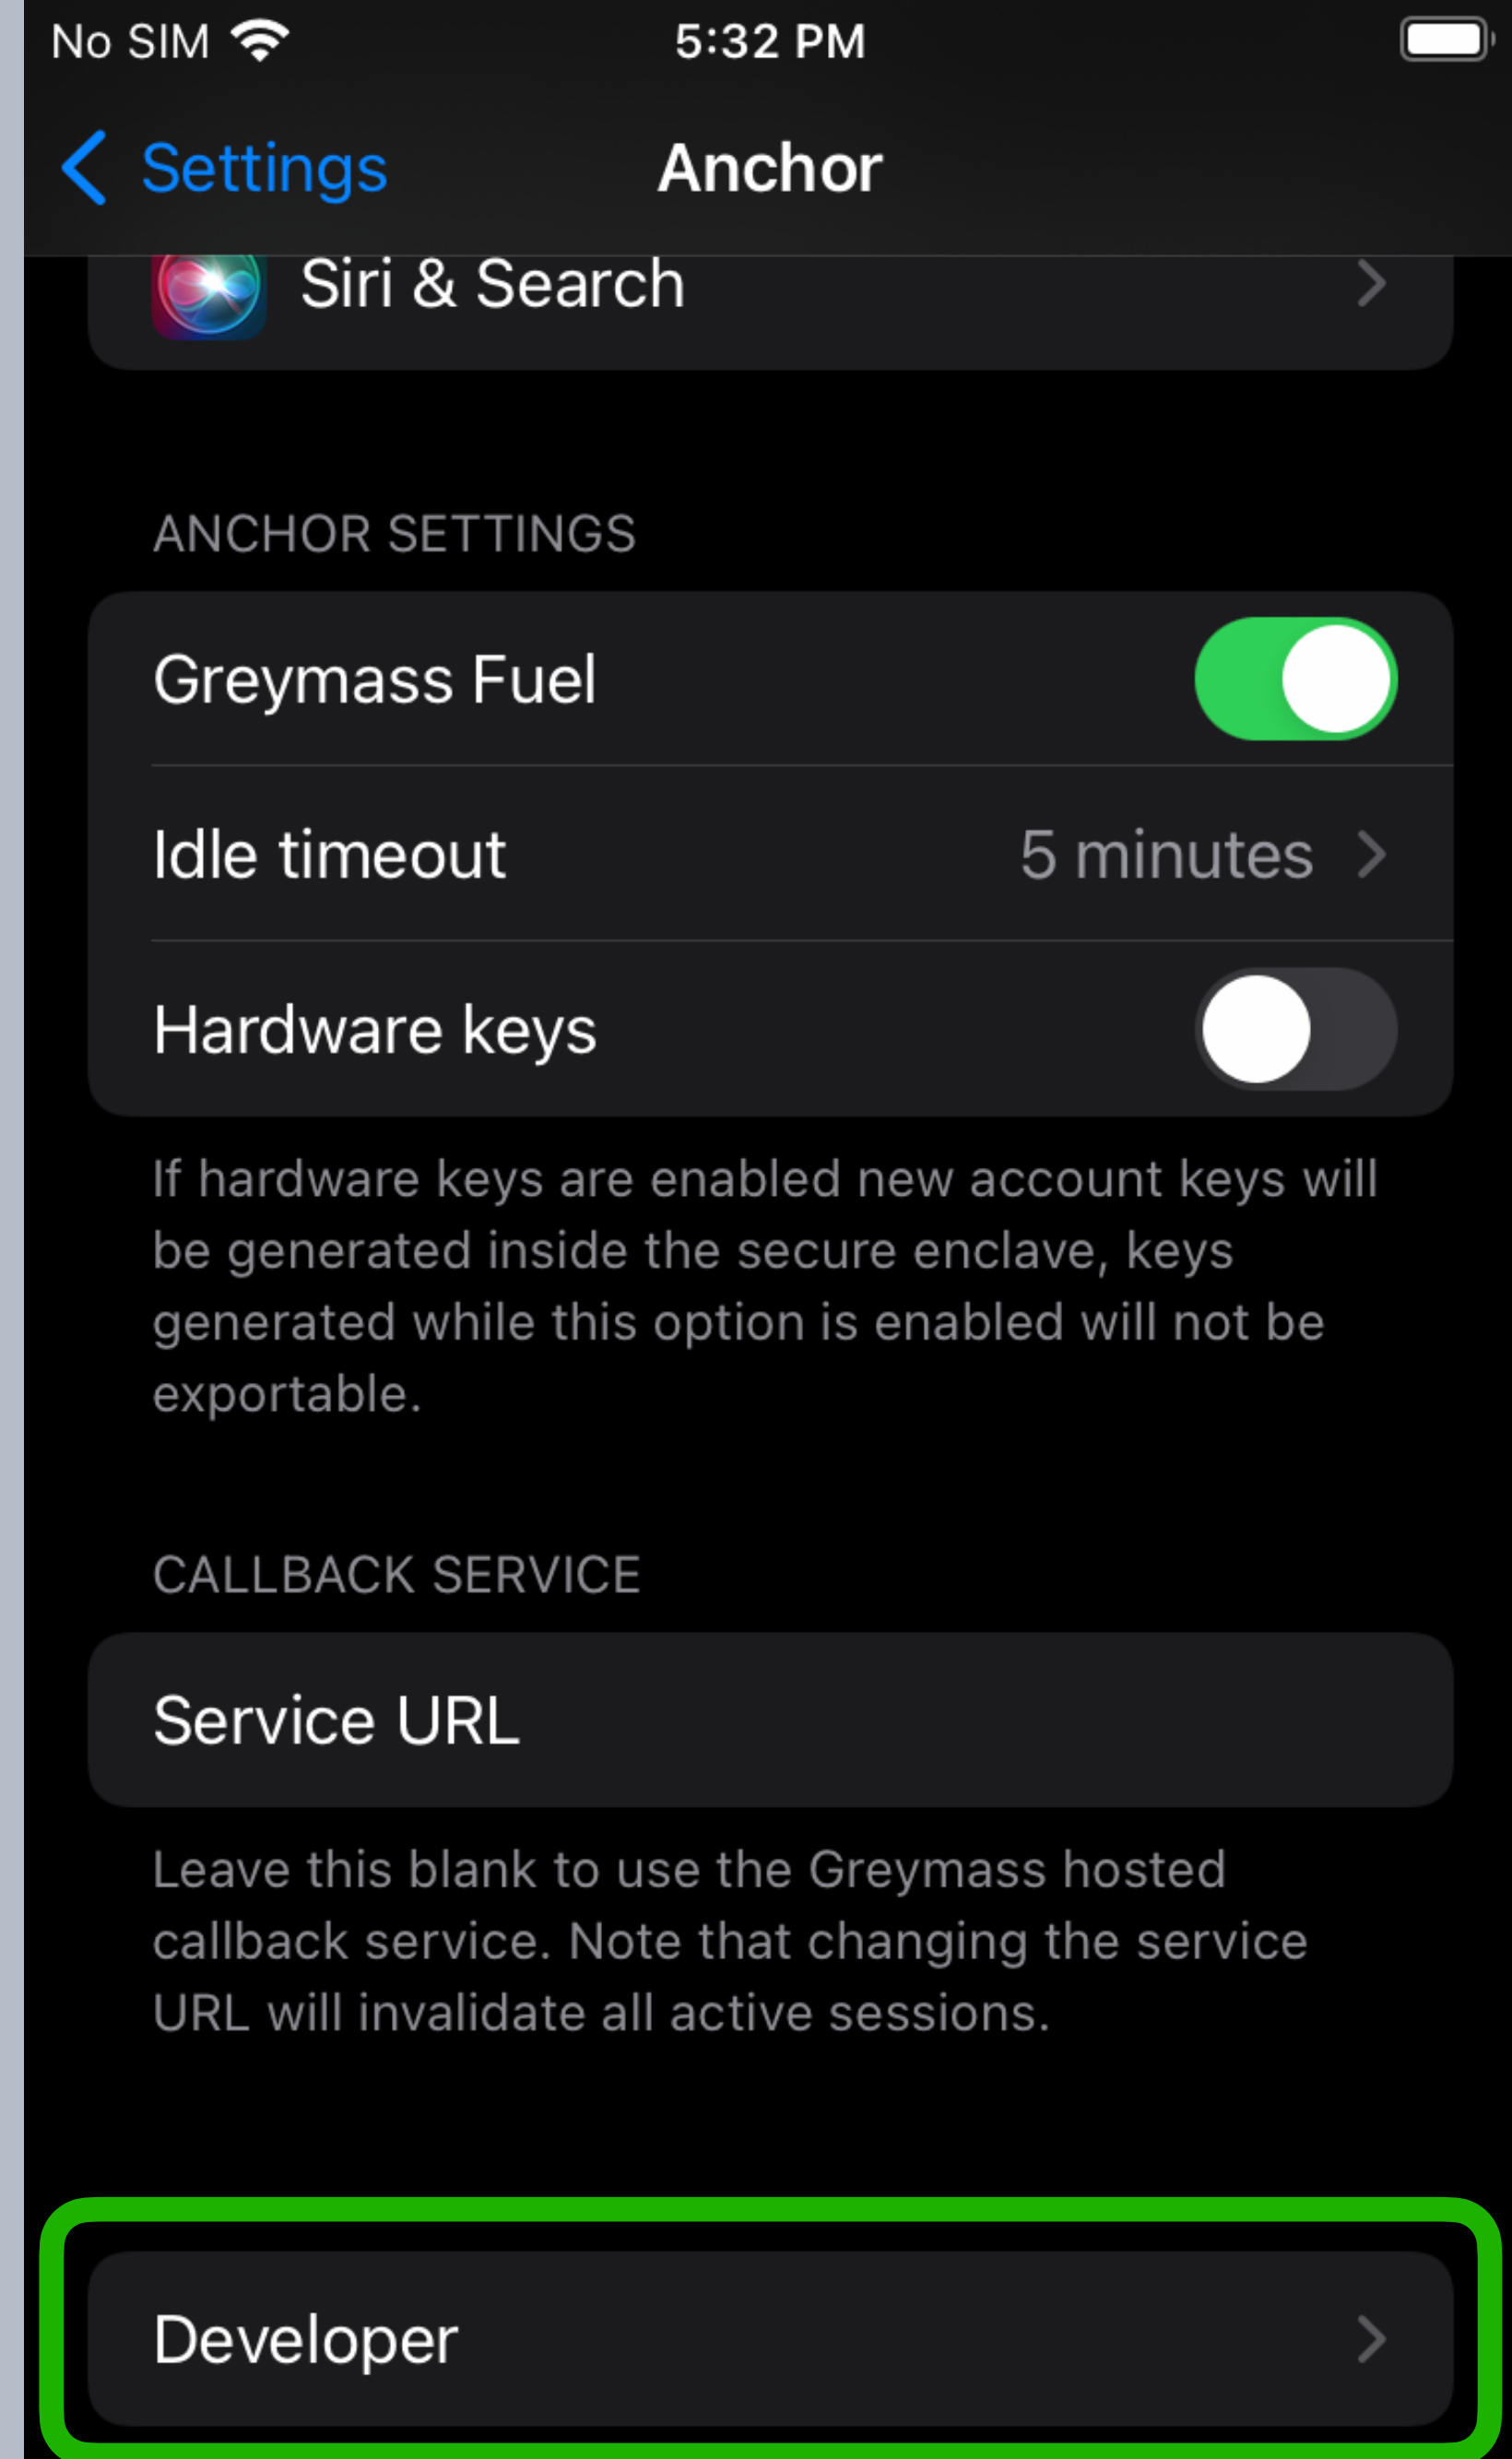

Select "Anchor" to continue
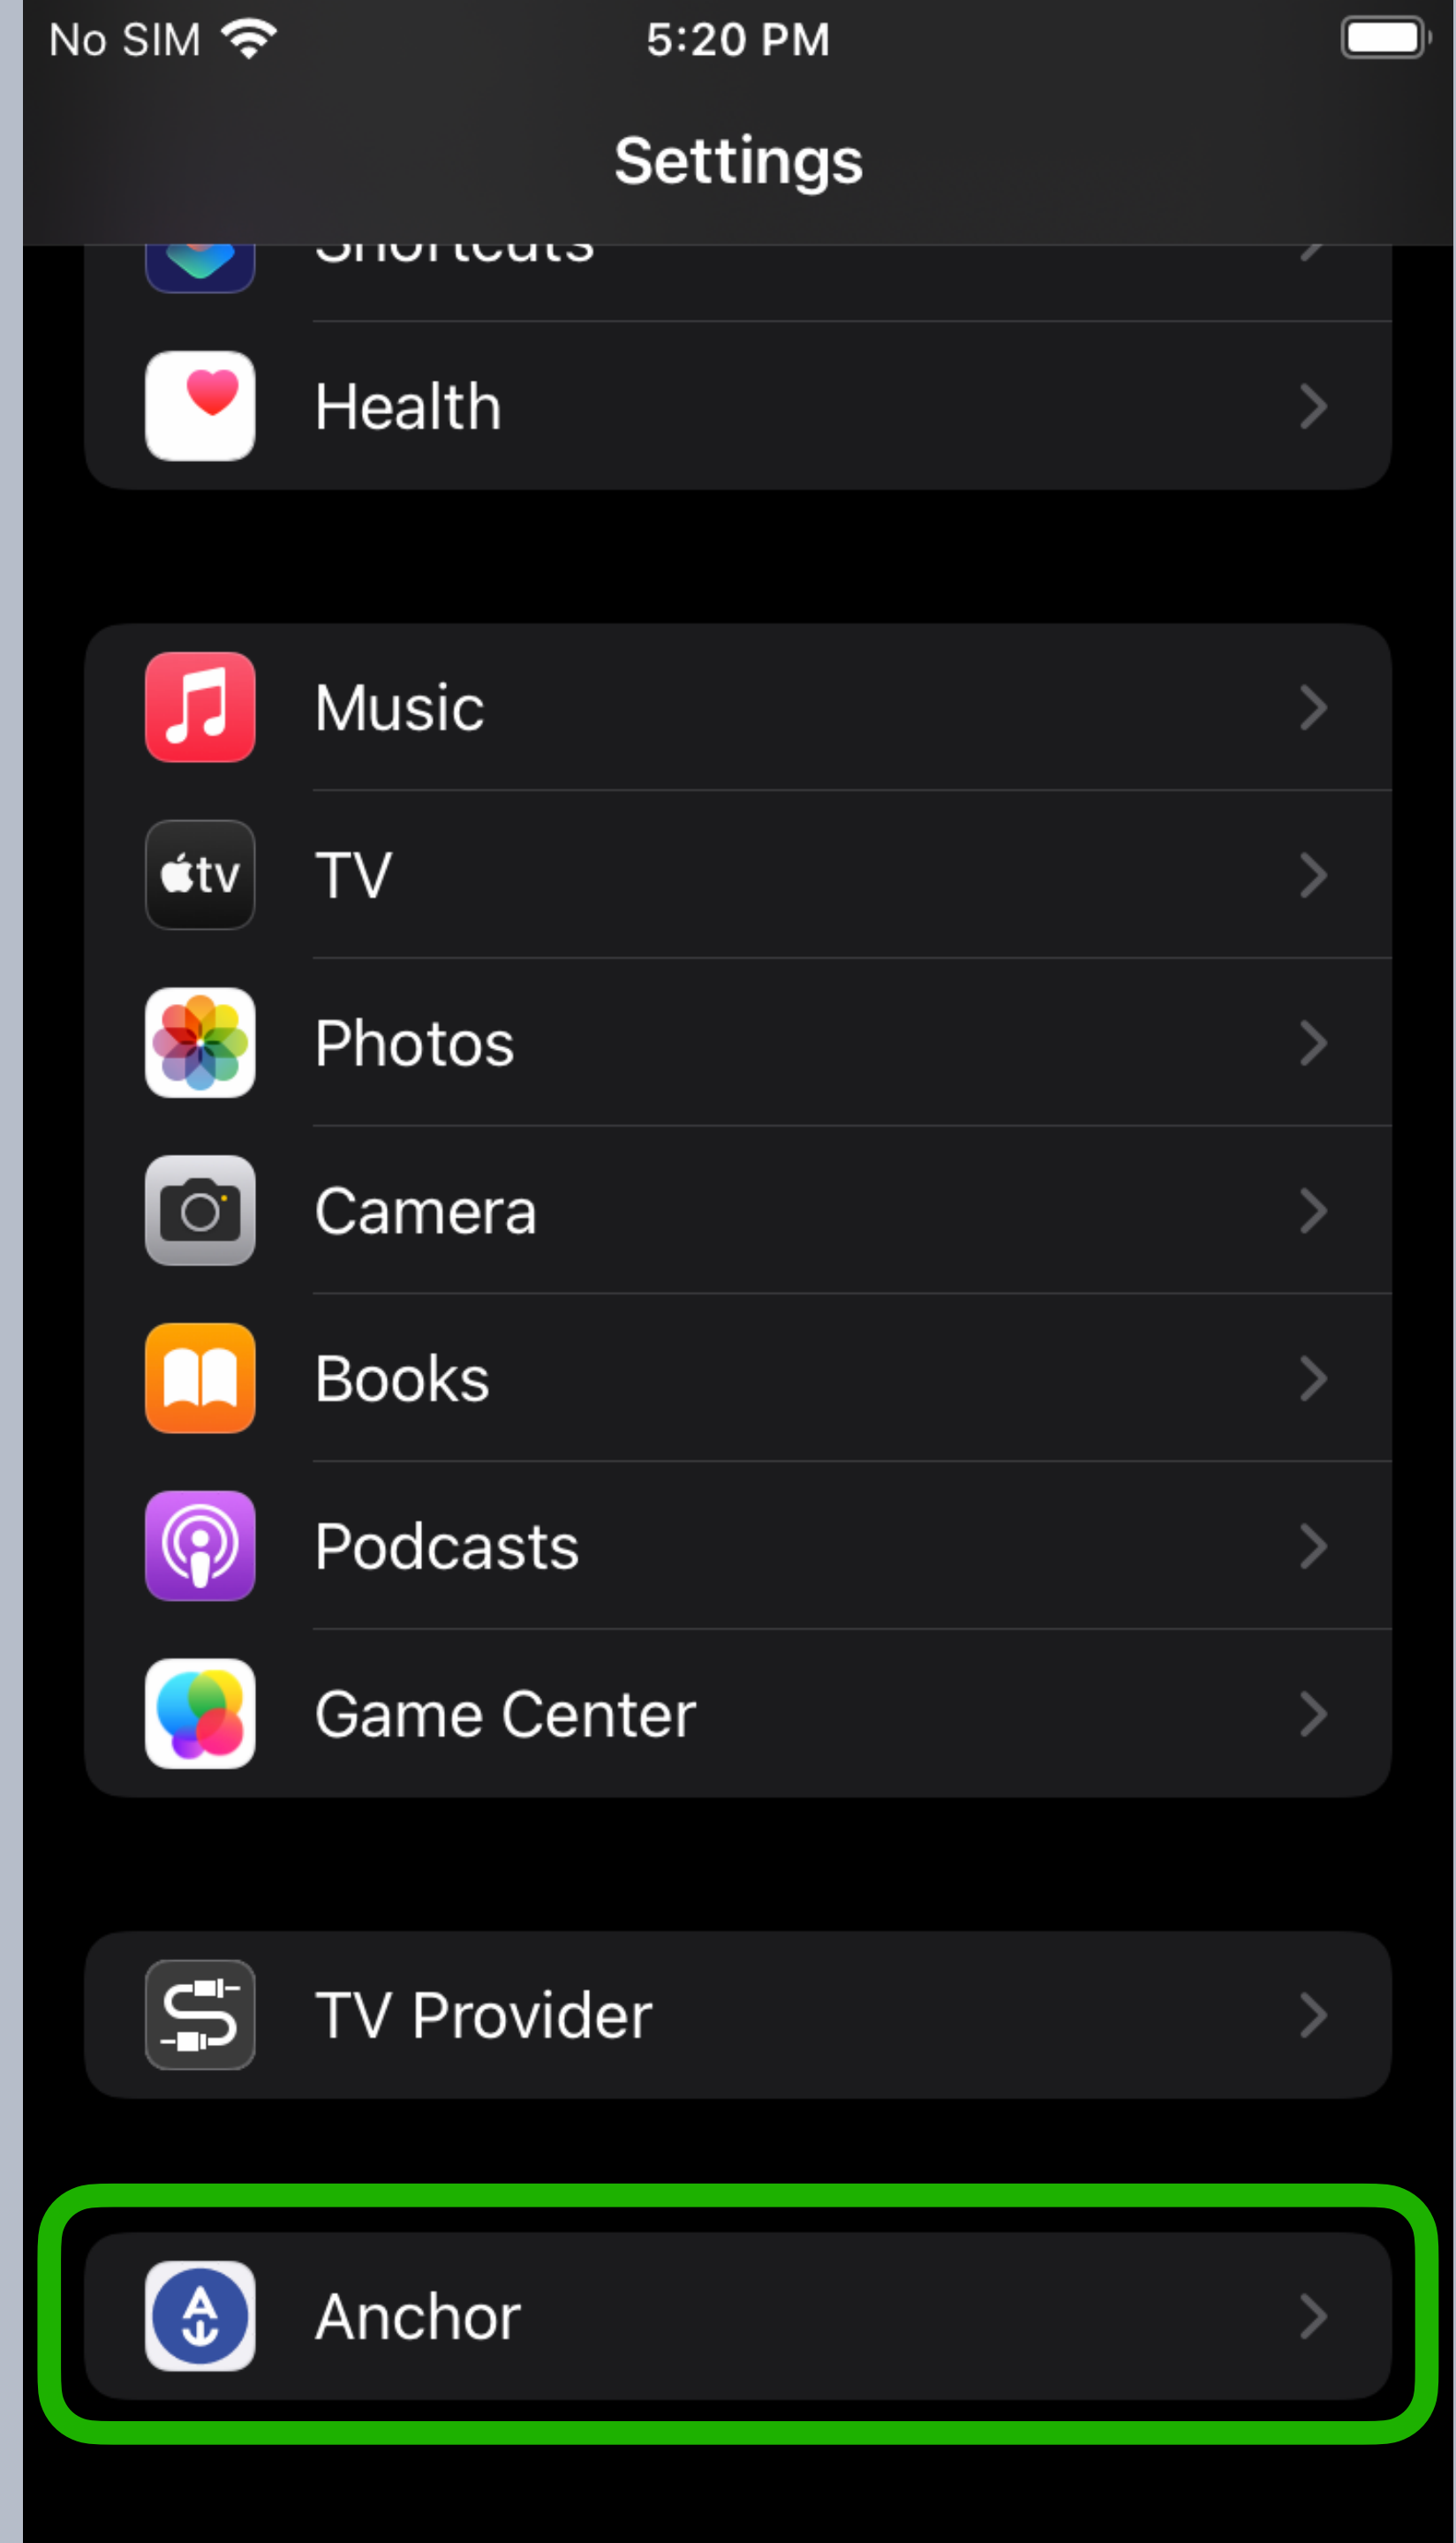

Step 2 - Developer Settings

In order to enable TestNets, we must access the Developer Settings. To do so, select "Developer" at the bottom of the screen

Idle timeout   5 minutes ›

Hardware keys   ◯

If hardware keys are enabled new account keys will be generated inside the secure enclave, keys generated while this option is enabled will not be exportable.

CALLBACK SERVICE

Service URL

Leave this blank to use the Greymass hosted callback service. Note that changing the service URL will invalidate all active sessions.

Step 3 - Enable TestNets

Within the Developer Settings, you should see the slider for "Enable testnets". Slide it to the right to enable.

You can now return to the Anchor app.

DEVELOPER SETTINGS

Enable testnets

If enabled a set of pre-configured testnets will be available. It will also enable developer tools that can be accessed inside the app by tapping five (5) times on the Anchor logo.

CUSTOM TESTNET

Chain ID

Node URL

If the above fields are filled out correctly the network will be made available along the default set of testnets.

Enabling TestNets in Anchor - iOS

Step 4 - Check for TestNets

To verify that TestNets are indeed enabled within Anchor, begin the Account Creation process (Home -> Add Account -> Create Account)

Within the list of potential account types to create, you should see TestNets at the bottom of the list.
